PROFESSIONAL SUMMARY

U.S. Marine Corps Veteran with hands-on experience delivering production-ready software, resolving high-impact defects, and improving accessibility and usability across complex platforms. Skilled in building responsive, modular systems, leveraging extensive training received from Boise State University, ACI Learning, and CodeWorks, with the ability to create scalable features. Brings a strong foundation in 3D Computing, full stack engineering, IT, network interconnectivity, and iterative development, supported by a background in technical communications gained from the military and supported by official trade education and a B.S. in Games, Interactive Media & Mobile.

EDUCATION | TRAINING

Bachelor of Science (B.S.) | Games, Interactive Media & Mobile | Boise State University May 2026

Software Development, Design, & Programming (12 Weeks) | Boise CodeWorks Software Immersive 2022

Computing Technology Industry Associate Training (5 Weeks) | ACI Learning 2020

TECHNICAL COMPETENCIES

Computer Languages & Tools

.NET | C# | TypeScript | Node.js | Express.js | Visual Studio | VS Code | Xcode | Swift | Windows | Mac OS/iOS | Arduino | HTML | CSS | Three.js | Postman | Photon Engine | JavaScript | Red Hat Linux | Python | Virtual Machines | MySQL | Unity Engine | React.js | Dapper | D3.js | Unreal Engine | Vite.js | GLSL

Computer Language Techniques

MVCS+R | MVVM | Game Programming | Finite State Machines | UI/UX | IoT Development | Single Page Application | Fullstack Development | Prototyping | Server/Client Model | Object Oriented Programming | Multiplayer Gaming | Data Management | SOLID Principles | 3D Math | Game Design | Game Logic | Databases | Mobile App Development | Object Relational Mapping | Unit Testing | Game Loops | Production Deployment

PROFESSIONAL EXPERIENCE

Autoscopic Industry Media | Boise, ID -> Denver, CO August 2026 – now

Owner, Lead Software Engineer & Architect, UI / UX, QA, Sales & Marketing

- Planned, designed architecture, and engineered a membership-based SaaS desktop application by leveraging AI technologies, enabling users to take control of high-grade live show production equipment
- Design and plan scalable solutions to maintain quality for a membership-based SaaS platform
- Understand complex technical issues and updates, strengthening the value of the platform by providing in-demand features
- Triage, debug, and resolve bugs found in quality assurance sweeps using structured troubleshooting and detailed documentation, ensuring water-tight web based services and recommended design implementation of chosen codebases
- Conduct proactive infrastructure monitoring and maintenance to sustain long-term stability, reliability, and security of the business's technical systems

Boise State Office of Information Technology | Boise, ID May 2022 – Feb. 2023

Web Analyst

- Analyzed WCAG accessibility and SEO performance data to identify gaps and recommend system-level improvements, driving university-wide compliance and enhanced web visibility
- Designed and planned scalable solutions to maintain accessibility standards and optimize performance across all Boise State web platforms and digital assets
- Communicated complex technical issues, updates, and recommendations to diverse stakeholders, strengthening cross-functional collaboration and accelerating project resolution
- Triaged, debugged, and resolved ServiceNow tickets using structured troubleshooting and detailed documentation, ensuring rapid restoration of web services

- Conducted proactive infrastructure monitoring and maintenance to sustain long-term stability, reliability, and security of university web systems

Boise State University, RADAR Center | Boise, ID Nov. 2023 – Aug. 2024
Web Maintenance & Content Creation Specialist

- Evaluated system capabilities and translated user requirements into functional web solutions, delivering intuitive digital tools that directly supported RADAR Center operations
- Designed and implemented a full-stack online registration and purchase system, streamlining event sign-ups and revenue collection for the center
- Trained staff members on new system usage through hands-on sessions, improving operational efficiency and reducing ongoing technical support requests by enhancing team fluency
- Diagnosed and resolved system inconsistencies through iterative testing and refinement, ensuring reliable performance and a seamless user experience

116 & West Marketing Agency | Boise, ID May 2022 – Feb. 2023
Front-End Web Developer

- Re-engineered front-end systems to improve modularity, performance, and maintainability, resulting in cleaner, more scalable codebases for client websites
- Managed multiple concurrent front-end development projects in a fast-paced marketing agency environment, consistently delivering high-quality solutions under tight deadlines
- Served as technical point-of-contact and led ongoing maintenance efforts across cross-functional teams, ensuring seamless project continuity and issue resolution
- Authored comprehensive technical documentation for newly developed systems to streamline onboarding, training, and knowledge transfer for developers and stakeholders
- Defined and documented architectural standards for re-engineered front-end systems, enhancing long-term scalability and maintainability across agency client projects

Neteo High Speed Internet | Morrison, CO Jan. 2020 – Nov. 2020
Internet Technician / Sales Rep.

- Diagnosed and resolved complex network and hardware issues in real-time field environments, ensuring rapid restoration of high-speed internet service for residential and business customers
- Delivered exceptional on-site technical support and tailored solutions to customers, enhancing satisfaction and promoting service upgrades in underserved Colorado communities
- Collected and analyzed customer usage data to identify trends and recommend service optimizations, contributing to improved network performance and retention
- Managed end-to-end service requests while coordinating installation logistics and scheduling, streamlining deployment processes, and minimizing customer downtime
- Investigated field technician escalations and proposed effective technical solutions, supporting team efficiency and consistent service quality across deployment areas

United States Marine Corps | Various Locations Mar. 2013 – Apr. 2017
Communications Technician

- Managed, inspected, and conducted monthly inventories for over 50 Principal End Items and over $1 million worth of Cryptographic Controlled Items; created a spreadsheet to track and document all assets with zero losses
- Maintained accountability of entire radio equipment; supervised the installation and operation of radio, electrical, and electronic assets; authored and delivered training to operators, enhancing equipment proficiency and performance
- Provided communications using radio assets and constructed antennas to ensure effective communication to Range Control, implementing a Safety Communication link for exercises
- Ensured proper Field Radio Operator training, readiness, and professional development of all subordinate radio personnel; authored and delivered effective training that bolstered the knowledge and performance of equipment operators
- Attended weekly meetings with department staff members to identify maintenance requirements and assign work taskings based on individual talent; created weekly reports and briefed department heads on maintenance statuses
